

Elliot Alladaye

Backend & AI Engineer

alladayeelliot@gmail.com • +33 6 XX XX XX XX • linkedin.com/in/elliott-alladaye
Northern France / Belgium • **Available full-time (CDI/CDD) from September 2026**

Profile

Backend & AI engineer with 2 years of experience shipping production AI tooling for Digital Twins, covering the full AI-integration lifecycle: LLM orchestration, embeddings, retrieval, and anomaly detection. I build reliable, extensible systems with a strong bias toward data privacy and ownership. **MSc in Artificial Intelligence** (University of Kent, conferred Sept 2026); 5-year French engineering degree (Epitech) completed in 2027.

Experience

Backend & AI Engineer — Stereograph

Jul 2024 – Aug 2025

Part-time then full-time

- Took an AI proof-of-concept to a production-ready product and maintained it alongside several other Python services.
- Built a **local-first RAG system** over clients' documents, keeping sensitive data off third-party APIs to guarantee privacy and data ownership.
- Shipped 3D-object anomaly detection that flagged modelling outliers automatically, reducing manual QA review time by ~X%.
- Migrated logging to **Datadog across 4 Python services**, reducing incident time-to-diagnose.

Full-stack & AI Intern — Stereograph

Jul – Dec 2023

Internship

- Built a chatbot (Python + ReactJS) embedded in Stereograph's BIM Digital-Twin software, enabling natural-language querying of building data.
- Created a text-driven interface for editing a Digital Twin's 3D view.
- Validated the technical feasibility of AI integration, earning a return offer to build out the product.

Projects

Saver — Tech Lead & Sole Backend Engineer

2023 – present

Production-grade AI bookmarking platform (Python 3.13, FastAPI)

- Owned the **entire backend**—architecture, API, database, AI pipeline, security, and observability—for a service that ingests arbitrary URLs, extracts content, and auto-classifies it.
- Designed an async FastAPI + PostgreSQL/pgvector backend with **hybrid search** (weighted semantic cosine + full-text ranking) over a Mistral AI embedding and classification pipeline.
- Built a hardened auth layer: Argon2 hashing, JWT access tokens, and rotating refresh tokens with automatic token-family revocation on theft detection.
- Implemented **SSRF-safe** URL fetching (DNS pinning, per-redirect validation) across 15 platform extractors with a browser-impersonation fallback.
- Shipped end-to-end observability: structured logging through Fluentd → OpenTelemetry → Loki → Grafana, 5 dashboards as code; enforced strict mypy and a full async test suite.

AREA — Automation Engine (Zapier-style)

- Built a microservices automation engine (Node.js + TypeScript), separating the API from background workers for modularity.
- Implemented a reliable RabbitMQ task queue with retry patterns, keeping workflows completing through transient failures.

Education

MSc Artificial Intelligence — University of Kent

2025 – 2026

Diploma conferred September 2026 — international double-degree year of the Epitech program.

Engineering Degree (Master's level), Software Engineering — Epitech

2022 – 2027

5-year French Grande École program; year abroad at the University of Kent. Diploma summer 2027.

Skills

Languages: Python, TypeScript, C/C++

AI / ML: LLM orchestration, embeddings & RAG, anomaly detection; NumPy, Pandas, scikit-learn, TensorFlow

Backend & Infra: FastAPI, PostgreSQL/pgvector, SQLAlchemy, REST APIs, ReactJS, Docker, Datadog, Grafana, Loki, OpenTelemetry

Spoken: French (native), English (bilingual)
